

Coronal Seismology

Laurel Farris
New Mexico State University

ABSTRACT

Here is my abstract.

1. Introduction

2. Background

2.1. Kink Oscillations

Aschwanden et al. (1999) investigated evidence of kink oscillations with data from TRACE. Pascoe et al. (2015) investigated the distributions of the damping of kink oscillations.

2.2. Sausage Oscillations

3. Data

As part of the general topic of coronal seismology, a small research project was carried out as well, continuing over from several semesters previously.

4. Analysis

5. Conclusion

And we're finished.
